

ASIGNIO

A better way to sign-in

Asignio's handwriting based biometric makes signing in easier, safer, and more personal.

Online transacting has grown dramatically, but so has risk, and hassle. The average user has over 100 passwords¹. Account takeover fraud is up almost 300%².

Simple

Sign-in on any device, anytime, anywhere.

No more passwords, annoying personal questions, or texted verification codes.

Easily implemented by any organization with **only a few lines of code**.

Secure

Synchronous Dual Biometrics—Live selfies are taken while you sign in for best-in-class multi-factor authentication.

Changeable—Any biometric (thumbprint, face, etc.) can be stolen. Only your Asignio sign-in can be easily changed at any time.

Personal

Handwriting has been used for centuries to prove it's you. Use initials or symbols to create your personal Asignio sign-in.
