

ASIGNIO

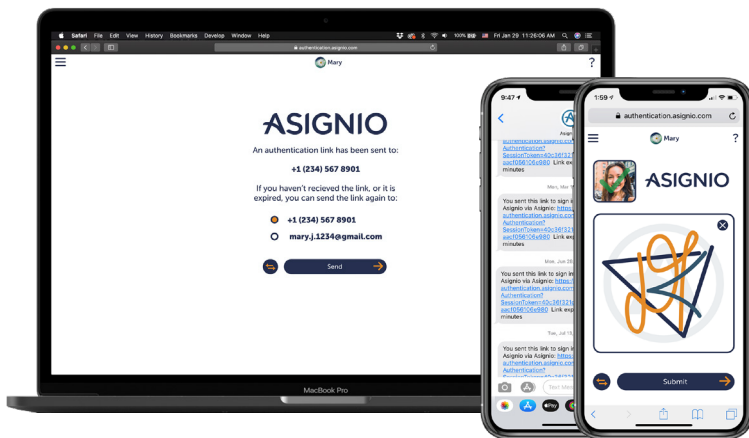

A better way to **sign-in**

A More Secure SMS OTP Solution The Asignio SMS Biometric

Account takeover fraud is up at an alarming rate, +282% in one year, and over 60% of customers who experience it change institutions

Don't risk losing customers due to fraudulent phishing or hacking of SMS OTPs. Add a layer of biometric security using the same SMS texts already familiar to your customers.

The Asignio SMS Biometric

Secure

Prevents fraud with our Synchronous Dual Biometric – live selfie + personal glyph of any symbols or letters

Simple

Same SMS system for the user with an added layer of biometric security

Easy implementation of API with only a few lines of code

Personal

Patented signature-based biometric unique to the user, can be used across any device, and can be changed, if needed

A better way to **sign-in**

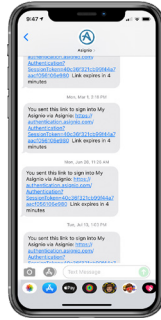

The Asignio SMS Biometric Process

The Asignio SMS biometric is as simple for your customers as using OTPs, just 4 easy steps. The system can also still default to an OTP in case users are not yet signed up with Asignio.

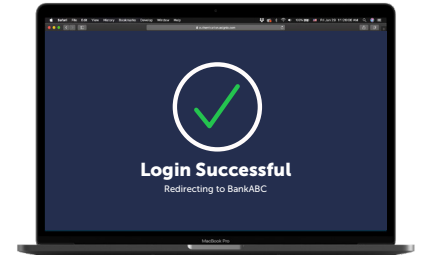

1. Request transaction

2. Receive link instead of PIN code

3. Sign-in with Asignio

4. Access automatically granted once signed in

Benefits

Single Asignio registration for the user

- No app to download
- Only takes a few minutes to set up Asignio account

Quick and easy API implementation using current SMS infrastructure

Adding biometric layer protects against:

- SMS swaps
- Phishing attacks
- SS7

Low cost biometric alternative to SMS OTP
